

WHAT TO EXPECT WITH YOUR DUSTLESS FLOOR REMOVAL

Clean Air Flooring Removal Checklist

OVERVIEW

1. Our DUSTLESS tile and hardwood removal is demolition. The impact caused at point of origin will at times launch and will cause incidental damage. We take every precaution to limit and prevent any damage. Most, if any is paint touch ups or reattaching baseboards.
2. Our system is DUSTLESS both visible and unseen. The nature of removal will create DEBRIS from our equipment as we work on removing from your home. This is NOT dust which is a fine, dry powder consisting of tiny particles carried in the air.
3. There is no exact science as to how long the removal will take as there are several methods used (or not used) in the original installation. Our methods are faster than the traditional way and your substrate will be installation ready when we are finished.

Other things to keep in mind:

- You can leave your HVAC system on. Our filtration controls airflow and directs it with negative pressure and will never make it to your HVAC components.
- You will not need to empty cabinets or pantry shelves.
- You will not need to plastic off or seal any adjoining rooms. We will drape plastic over areas affected by debris caused by the nature of removal.
- You will not have to remove fixtures, paintings or pictures from walls if properly installed.
- You can stay home through the entire removal process.

APPROVAL AND AUTHORITY TO PROCEED

We approve the project as described above, and authorize the team to proceed.
